

Note: servo channels are not protected. Put resistor in series as on servo header.

Put this on top side of board, facing expander board. This has pins recessed/protected.

Stacking height: using 0.020" pcb cover and spacer: sr
connector: 3.0mm height. 0.02" = 0.51mm. 100ml connector:
3.54 height. So stacking height from top of motherboard
through cover to bottom of expander is 4.02-4.05 mm
